SUMMARY

Fullstack Developer with 4+ years of experience and a strong product mindset: dig into business context, ask 'why', and drive product decisions. Python (FastAPI), Vue, React: from API design to user interfaces. Claude Code power user, use it daily to ship faster. High agency: carry features from idea to production, own the outcome, and keep them running.

TECHNICAL SKILLS

Python, FastAPI, React, TypeScript, PostgreSQL, Vue.js, Docker, Next.js, SQLAlchemy, Redis, JavaScript, Tailwind CSS, Vite, Zustand, Playwright, Microservices, Sass, CI/CD, Git, Claude Code, Cursor

EXPERIENCE

Fullstack Developer (Python, React)

May 2025 – Present

KEYGO (property management)

Moscow, Russia (Remote)

- Cut page load time up to 81% (LCP 4.7s to 0.9s) by leading a full client frontend rebuild: Next.js 16 with Turbopack, TypeScript, Tailwind v4 design system and a pnpm monorepo, with mobile-responsive UX and zero layout shift
- Rebuilt the booking funnel end-to-end: mobile checkout wizard, Airbnb-style search with inline filters, in-checkout promo codes and a reworked ranking core, turning a leaky flow into a conversion-ready funnel
- Built a financial calculation freezing and versioning mechanism that aligned host reports with the payouts page, eliminating reporting discrepancies across \$200K+ in monthly transactions
- Migrated platform-wide authentication from JWT to revocable Redis-backed session cookies across all services, with brute-force protection and a zero-downtime password migration
- Drove AI-assisted development across a 5-engineer team as frontend technical owner: mentored the team on Claude Code workflows, unified codestyle, and lifted overall delivery throughput

Stack: Python, FastAPI, MongoDB, Redis, React, Next.js, Turbopack, TypeScript, Tailwind CSS, PostHog, Sentry

Python Backend Developer

Mar 2024 – Apr 2025

Realytics (AI performance analytics for consumer businesses)

Nicosia, Cyprus (Remote)

- Built and owned a mission-critical, SLA-bound B2B API delivering weekly competitive intelligence to a major European food-delivery client, with full data traceability and audit trails end to end
- Built an async ETL pipeline normalizing 20GB+/day from disparate sources (maps, delivery platforms, reviews) into a unified analytics store, feeding near-real-time aggregations
- Designed two API microservices: an LLM service that parsed messy, unstructured addresses into clean structured data, and a localization service

Stack: Python, FastAPI, Clickhouse, PostgreSQL, Redis, RabbitMQ, Docker, Prometheus, Grafana

Python Backend Developer

Jan 2022 – Mar 2024

e-comet.io (analytics and promotion automation service for Wildberries)

Moscow, Russia

- Cut API latency 40% and ClickHouse load 20% on a high-load analytics API serving 300GB/day of marketplace data over an 8TB+ warehouse, by tuning queries and data pipelines
- Developed fail-safe mechanisms for all critical pricing and advertising budget operations, guaranteeing safe system performance for 200+ clients even during external API and internal service unavailability

Stack: Python, FastAPI, Clickhouse, PostgreSQL, Redis, RabbitMQ, Docker, Elasticsearch, Yandex Cloud

PROJECTS

AI Tarot @TarotMeowBot + Gramkit OSS [GitHub](#)

2024 - 2025

- Built and shipped an AI product solo, from zero to production (architecture, payments, analytics, CI/CD): grew to 1,500+ users at 85% D1 retention, with up to 7% paid conversion among paywall-exposed users and every product decision driven by PostHog analytics (50+ events, cohort funnels). Extracted the core into Gramkit, an open-source type-safe monorepo framework (OpenAPI-to-TypeScript codegen, Vue/React templates, auth, payments).

Stack: FastAPI, Pydantic AI, SQLAlchemy, PostgreSQL, Redis, Vue, React, Next.js, TypeScript, Tailwind CSS, Docker

EDUCATION

National Research University Higher School of Economics

2020 – 2024

Bachelor's - Applied Mathematics and Computer Science

Faculty of Computer Science
